

FY 2021 Ending the HIV Epidemic - Primary Care HIV Prevention (PCHP) Example Work Plan

You will complete a work plan as part of the PCHP application in the HRSA Electronic Handbooks (EHBs). Your work plan should outline activities that will help you achieve the PCHP objectives:

- Increase the number of patients counseled and tested for HIV.
- Increase the number of patients prescribed PrEP.
- Increase the number of patients linked to HIV care and treatment.

The following incomplete example is provided for reference only. Ensure that your work plan includes at least two activities for each focus area and provides a rationale for each activity. See section IV.2.v of the PCHP NOFO and the EHBs Application User Guide for guidance on completing your work plan.

Focus Area <i>All focus areas are pre-populated and required.</i>	Activity <i>Select from the list of activities in Appendix A of the PCHP NOFO or write in your own "other" activity for each focus area. At least two activities per focus area are required.</i>	Activity Selection Rationale <i>Describe how each activity addresses an unmet need or barrier to achieving the PCHP objectives that is specific to your service area and/or health center.</i>
PrEP prescribing	<ul style="list-style-type: none"> • Support PrEP adherence through care integration and coordination support that address co-existent behavioral health conditions and social determinants of health. 	<ul style="list-style-type: none"> • Supporting use of PrEP by connecting patients to needed enabling and social services, including health care benefits, medication assistance and donation programs, housing assistance, and vocational training, will increase PrEP adherence.

Focus Area <i>All focus areas are pre-populated and required.</i>	Activity <i>Select from the list of activities in Appendix A of the PCHP NOFO or write in your own "other" activity for each focus area. At least two activities per focus area are required.</i>	Activity Selection Rationale <i>Describe how each activity addresses an unmet need or barrier to achieving the PCHP objectives that is specific to your service area and/or health center.</i>
Outreach	<ul style="list-style-type: none"> • Organize and participate in community health fair events to attract and enroll community members and raise awareness of HIV, PrEP, post-exposure prophylaxis (PEP), and how to reduce HIV infection risk. 	<ul style="list-style-type: none"> • Participation in two community health events will facilitate identifying new and existing patients at risk for HIV.
Testing	<ul style="list-style-type: none"> • Enhance the electronic health record with clinical decision support to facilitate the consistent use of clinical guidelines on HIV testing, prevention, referral, and treatment, as well as appropriate management of PrEP. 	<ul style="list-style-type: none"> • Establishing internal protocols that support the consistent use of workflows and clinical guidance will improve consistent and appropriate application of CDC HIV testing guidelines to increase the number of patients tested for HIV.
Workforce Development	<ul style="list-style-type: none"> • Hire primary care providers and clinical pharmacists who can deliver HIV prevention services, including follow-up HIV testing, prescribing PrEP and PEP, co-occurring condition management, and HIV treatment. 	<ul style="list-style-type: none"> • Adding 0.5 FTE to an existing family physician to expand the role will increase the number of PrEP prescriptions and HIV tests, and management of substance use disorder and mental health conditions.
